## Mechanism

Metaxdoor revolving door systems canopies are manufactured as modular; from only aluminium alloy and without any kind of welding.

Mechanic units are designed specially for revolving door systems, within our research and development facilities and in cooperation with top European companies. These systems are manufactured to far exceed your expectations.

## Glasses

As standard; 4+4mm curved laminated glasses are used on fixed frames and 8 mm tempered glasses are used on the moving wings. 5+5 mm curved laminated and 10 mm tempered glasses can also be used upon demand. Providing these qualities and dimensions, any kind of color and colored reflected glasses can be used as options on the system. Glasses are protected from outside effects by glass seals.

## Wings

A harmony is created by the unique designed frame profiles and natural horse hair brushes surrounding the frame in the wings of Metaxdoor revolving door systems. With this harmony; air, dust and noise insulation is maximized. The unique design used in the profiles provides Metaxdoor revolving door systems with toughness along with an extremely chic look.
